

Array in C

1. Find the maximum and minimum elements in an array:

```
#include <stdio.h>

int main() {
    int size;

    printf("Enter your array size: ");
    scanf("%d", &size);

    int arr[size];

    for(int i = 0; i < size; i++)
    {
        printf("%d index: ", i);
        scanf("%d", &arr[i]);
    }

    // Find the Maximum and Minimum Element:

    int min = arr[0], max = arr[0];

    for(int i = 0; i < size; i++)
    {
        if(arr[i] < min)
        {
            min = arr[i];
        }
        else{
            max = arr[i];
        }
    }

    printf("\nMinium element in the array is: %d", min);
    printf("\nMaxium element in the array is: %d", max);

    return 0;
}
```

2. Reverse number in an array:

```
#include <stdio.h>

int main() {

    int size;

    printf("Enter your array size: ");

    scanf("%d", &size);

    int arr[size];

    for(int i = 0; i < size; i++)

    {

        printf("%d index: ", i);

        scanf("%d", &arr[i]);

    }

    // Reverse an array

    printf("\nElements of reverse array: ");

    for(int i = size - 1; i >= 0; i--)

    {

        printf("%d\t", arr[i]);

    }

    return 0;

}
```

3. The sum and average number in an array:

```
#include <stdio.h>

int main() {

    int size;

    printf("Enter your array size: ");

    scanf("%d", &size);

    int arr[size];

    for(int i = 0; i < size; i++)

    {

        printf("%d index: ", i);

        scanf("%d", &arr[i]);

    }

    //Sum and average element in an array:

    int sum = 0, average;

    for(int i = 0; i < size; i++)

    {

        sum += arr[i];

    }

    average = sum / size;

    printf("\nArray elements of sum: %d", sum);

    printf("\nArray elements of average: %d", average);

    return 0;

}
```

4. Find the Element from the Array:

```
#include <stdio.h>

int main() {

    int size;

    printf("Enter your array size: ");

    scanf("%d", &size);

    int arr[size];

    for(int i = 0; i < size; i++)

    {

        printf("%d index: ", i);

        scanf("%d", &arr[i]);

    }

    // Find the Element from the Array

    int value, flag = 0;

    printf("\nEnter searching elements: ");

    scanf("%d",&value);

    for(int i=0; i<size; i++)

    {

        if(arr[i] == value)

        {

            printf("Element %d found at index %d", value, i);

            flag = 1;

            break;

        }

    }

    if(flag ==0)

    {

        printf("Your provide element not found in the array.");

    }

    return 0;

}
```

5. Rotated Array Elements to the Right:

```
#include <stdio.h>

int main() {
    int size;

    printf("Enter your array size: ");
    scanf("%d", &size);

    int arr[size];
    for(int i = 0; i < size; i++)
    {
        printf("%d index: ", i);
        scanf("%d", &arr[i]);
    }

    // Rotated Array Elements to the Right:
    int k = arr[size - 1];
    for(int i = size - 1; i > 0; i--)
    {
        arr[i] = arr[i-1];
    }
    arr[0] = k;
    printf("\nRotated array elements in right: ");

    for(int i = 0; i < size; i++)
    {
        printf("%d\t", arr[i]);
    }
    return 0;
}
```

6. Delete elements in an array:

```
#include <stdio.h>

int main() {
    int size;

    printf("Enter your array size: ");
    scanf("%d", &size);

    int arr[size];

    for(int i = 0; i < size; i++)
    {
        printf("%d index: ", i);
        scanf("%d", &arr[i]);
    }

    // Delete elements in an array:

    int index;

    printf("\nEnter the index to delete: ");
    scanf("%d", &index);

    for(int i = index; i < size - 1; i++)
    {
        arr[i] = arr[i+1];
    }

    size--;

    printf("Array after deletion: ");
    for(int i = 0; i < size; i++)
    {
        printf("%d\t", arr[i]);
    }

    return 0;
}
```
